CUSTOM NUTRITION & MANAGEMENT SERVICES

Nutrition

- Customized feeding programs for pullets and layers, including feeding guides and formulas for the top production at the best cost.
- Regular evaluation of ingredient costs and updates of best-cost formulas on an "as needed" basis.
- Location and evaluation of ingredient suppliers and contract feed manufacturers.
- Quality control programs to evaluate and monitor ingredients and ingredient suppliers.
- Low-inclusion-rate micro-ingredient packages to fit your feed manufacturing situation.

Management

- Regular on-site, in-person service calls, phone and e-mail consultation.
- Management advice based on AGRI-TECH's broad customer base and years of experience.
- Ongoing evaluation of production and performance to aid management decision making

PRODUCTS AND SERVICES

Ration Design

AGRI-TECH pullet and layer rations are designed to provide a wide range of nutrient levels to optimize body weight, uniformity, egg production and egg size. Rations are generated by computerized least-cost formulation and are based on daily needs for essential nutrients (digestible amino acids, calcium, phosphorus, vitamins, trace minerals). Ration formulas are based on locally available ingredients and are updated as needed to allow for changes in the content and price of ingredients.

Ration Scheduling

All customers are provided with a customized AGRI-TECH Feeding Guide that prescribes the precise rations and feeding recommendations for each operation. Recommendations are based on house temperature, strain, rate of lay, feed intake and flock age. AGRI-TECH Feeding Guides are developed for pullets, first-cycle layers and molted flocks.

Phase Feeding

AGRI-TECH phase feeds critical nutrients based on feed intake and flock age. Our objective is to provide the nutrients necessary for peak production without over formulation. To maximize egg shell quality, calcium and phosphorus levels are altered as the flock grows older.

AGRI-TECH pullet and layer nutrition programs are designed by people with extensive experience in the business of producing eggs. All programs and procedures are developed and tested in company owned flocks before being introduced to the industry.
